

Compiere® Professional Edition

Compiere Professional is a modern, highly adaptable, enterprise-class business solution – that can be deployed on-premise or on the Cloud – for a fraction of the cost of traditional ERP systems. Improve agility and dramatically lower cost of ownership with Compiere.

HIGHLY ADAPTABLE, ENTERPRISE – CLASS APPLICATIONS...

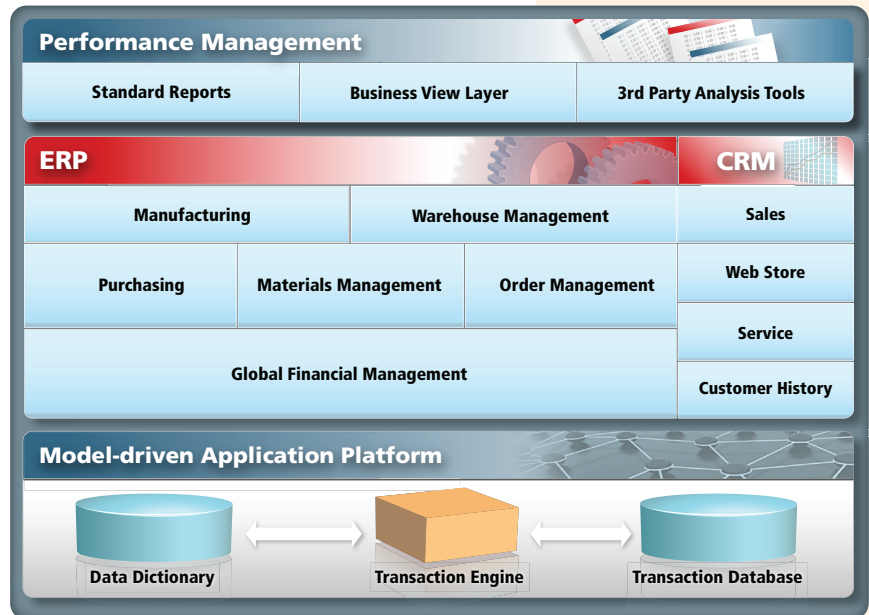

Compiere delivers a broad and rich set of integrated business functionality on a global-ready platform. It supports any number of organizations, warehouses, languages, currencies, and accounting rules. The scalable and adaptable Compiere platform handles high transaction volumes and business complexity required by demanding businesses of all sizes.

Compiere's revolutionary design enables applications to be easily customized and extended without programming – a first in the ERP industry. Applications are defined as objects in an Active Data Dictionary rather than programmed as 3GL code. Your IT staff will easily embrace the techniques required to extend Compiere.

Importantly, Compiere's innovative design reduces the cost and effort associated with upgrading business applications. Compiere's Automated Upgrade Technology reliably deploys the latest Compiere improvements while preserving all of your business-specific extensions.

BUILT ON A MODERN, OPEN SOURCE PLATFORM

Securely access Compiere from any Web-enabled location anywhere, anytime with a highly interactive user experience. The platform is based on a Service Oriented Architecture (SOA), with patent-pending dynamic web services enabling integration to in-house or complementary systems, including connectors to Salesforce.com. Based on open source technology, Compiere Professional is a proven way to lower IT costs, reduce vendor dependence and any project risk because you always have access to the source code.

ON-PREMISE OR ON THE CLOUD

Compiere gives you the choice to deploy your applications in your own data center or on the Amazon Cloud. Amazon's Elastic Compute Cloud (EC2) provides a professionally managed computing infrastructure over the internet that is private, secure and scalable on demand.

...AT A FRACTION OF THE COST

Compiere completely disrupts the traditional cost structure of acquiring, deploying, and maintaining ERP systems. Compiere is available without up-front license fees, and can dramatically lower annual operating costs – saving up to 80% in total cost of ownership. You gain cost savings and flexibility – without vendor lock-in.

With Compiere, you are in control but not alone. Your customized solution is backed by Compiere, Inc. and the Compiere Partner Network who offer a range of services to ensure your success.

Compiere Professional Edition applications are easily customized without programming

"If you're seeking an open source ERP alternative with broad functionality, look no further."

— InfoWorld BOSSIE Awards

Compiere® Professional Edition
